REQUEST FOR PROPOSAL

RFP # SM-PRC0001033

Student ID Verification

Due: 05.04.2021 before 12:00 p.m. MT

EXHIBIT'D'

Information Requested

1. **Please provide proof and describe your process around the ability to check andvalidate government issued IDs that are virtual as well as physical.**

2. **Please describe your options and speed to quickly check and validate studentgovernment issued IDs and store information easily.**

When the candidate logins to the application from their phone, they will take a photo of their government issued photo ID. The AI algorithms will parse the data and store it on their device. The parsed information will be sent as an encrypted token to our servers to compare the provided sample with the sample that will be taken during the onboarding process. If the two samples do not match up, they will not be able to continue through the onboarding process.

3. **Please describe your options and speed for selfie photos for verification after ID issaved.**

The candidate will take a photo of their face via the application and the AI will map their face and compare the sample provided to the sample taken during onboarding. If the two samples do not match up, they will not be able to continue in the onboarding process.

4. **Please describe your ability to verify identification without storing or saving ID (i.e.,military ids).**

The information on the ID will be saved on the candidate's device per the FIDO Alliance process that is used by bank and credit card companies. The information will be parsed, and we will receive it as an encrypted token.

5. **Please describe your plan for SSO login for WGU employees or other secureconnections to vendor site.**

Through an LTI integration, we can provide SSO options through the LMS for the faculty, staff, and any other approved WGU personnel.

6. **Please detail your options to check ID days prior to exam.**

Once the candidate information is loaded into the ExamRoom.AI system from WGU's LMS, the candidate will be able to download our free application, login, and provide the pre-identity

registration information of their ID and photo. We prefer this to be done in advance of their exam, not when they are starting their exam as this will result in delays. Ultimately, the student can provide it at anytime once their account has been created in ExamRoom.AI.

7. **Please provide documentation of the ability to store for IDs for at least 6 months**

8. **Please describe your options for alternative ID verification options.**

Typically, we recommend that candidates provide a government issued photo ID, but we can accept which ever alternative (student ID, employee badge, etc.) that WGU deems acceptable.

9. **Please describe your data purge process for this program.**

10. **Please describe how you can accept expired IDs as long as the pictures match.**

The information that is parsed from the ID will capture if the ID is expired. If WGU feels that it is acceptable to continue and allow for candidates to use expired IDs, we can override this rule and allow them to continue with the process.

11. **Please describe your plan to be able to use the above requirements across the learner's education lifecycle.**

12. **Please describe your plan and ability to accommodate projected volumes of approximately 7,000-8,000 students for assessments monthly, including Phase Itotals of approximately 4,000-5,000 assessments monthly, based on successful volume of Phase I.**
